

The invention provides a personal Web guide system, which allows a user of a client system, in particular a computer-novice user, to enjoy viewing a sequence of Web pages automatically as predefined in a schedule program. Specifically, the system includes schedule program memory including a schedule program in which a plurality of Internet resource addresses are registered in predetermined sequential order. The personal Web guide system further includes a client system (TV settop box system, mobile phone, PC, etc.) including a display. The client system is configured to download plural sets of Internet resource data whose addresses are registered in the schedule program from the Internet, and to display the plural sets of downloaded data in the predetermined sequential order on the display.
